

UC1842 UC2842 UC3842

Current-Mode PWM Controller

Product Specification

DESCRIPTION

The UC1842 family of control ICs provides in an 8-Pin mini-DIP the necessary features to implement off-line, fixed-frequency current-mode control schemes with a minimal external parts count. This technique results in improved line regulation, enhanced load response characteristics, and a simpler, easier to design control loop. Topological advantages include inherent pulse-by-pulse current limiting.

Protection circuitry includes built-in undervoltage lock-out and current limiting. Other features include fully-latched operation, a 1% trimmed bandgap reference, and start-up current less than 1mA.

These devices feature a totem-pole output designed to source and sink high peak current from a capacitive load, such as the gate of a power MOSFET. Consistent with N-channel power devices, the output is low in the OFF-state.

FEATURES

- Low start-up current ($\leq 1\text{mA}$)
- Automatic feed-forward compensation
- Pulse-by-pulse current limiting
- Enhanced load response characteristics
- Undervoltage lock-out with hysteresis
- Double pulse suppression
- High current totem-pole output
- Internally-trimmed bandgap reference
- 400kHz operation, guaranteed min

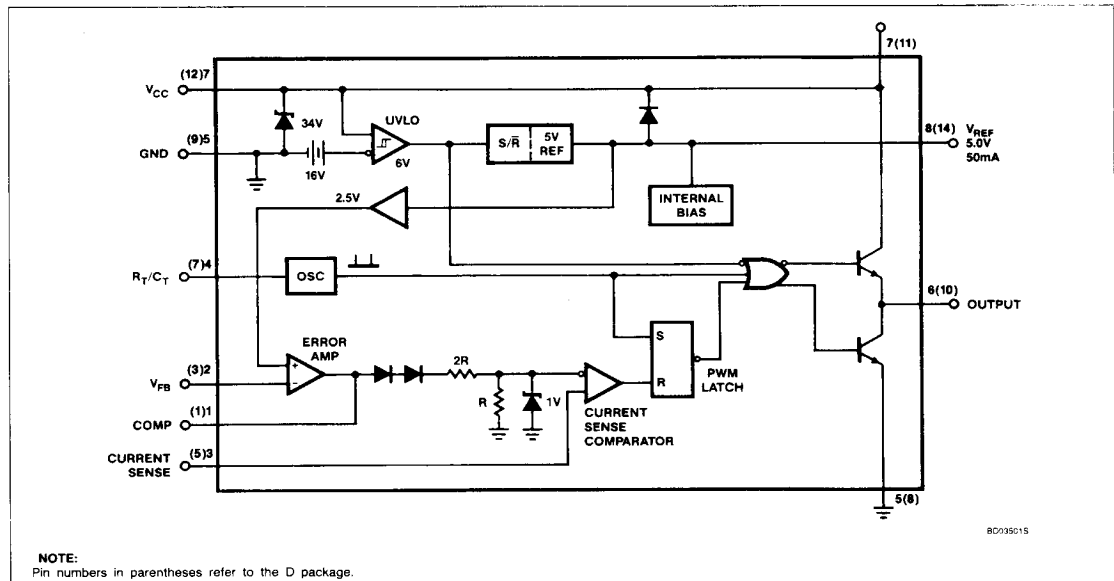

APPLICATIONS

- Off-line switched mode power supplies
- DC-to-DC converters

ORDERING INFORMATION

DESCRIPTION	TEMPERATURE RANGE	ORDER CODE
8-Pin Plastic DIP	0 to +70°C	UC3842N
14-Pin Plastic SO	0 to +70°C	UC3842D
8-Pin Plastic DIP	-40 to +85°C	UC2842N
14-Pin Plastic SO	-40 to +85°C	UC2842D
8-Pin Plastic DIP	-55 to +125°C	UC1842N

ABSOLUTE MAXIMUM RATINGS¹

SYMBOL	PARAMETER	RATING	UNIT
V_{CC}	Supply voltage ($I_{CC} < 30\text{mA}$)		Self-Limiting
V_{CC}	Supply voltage (low impedance source)	30	V
I_{OUT}	Output current ^{2, 3}	± 1	A
	Output energy (capacitive load)	5	μJ
	Analog inputs (Pin 2, Pin 3)	-0.3 to 6.3	V
	Error amp output sink current	10	mA
P_D	Power dissipation at $T_A \leq 70^\circ\text{C}$ (derate $12.5\text{mW}/^\circ\text{C}$ for $T_A > 70^\circ\text{C}$) ²	1	W
T_{STG}	Storage temperature range	-65°C to +150	°C
T_{SOLD}	Lead temperature (soldering, 10sec max)	300	°C

NOTES:

1. All voltages are with respect to Pin 5; all currents are positive into the specified terminal.
2. See section in application note on "Power Dissipation Calculation".
3. This parameter is guaranteed, but not 100% tested in production.

	V _{CC} zener voltage	I _{CC} = 25mA		34			34		V
Maximum operating frequency section									
	Maximum operating frequency for all functions operating cycle-by-cycle		400			400			kHz

NOTES:

1. These parameters, although guaranteed, are not 100% tested in production.

2. Parameter measured at trip point of latch with $V_{PIN\ 2} = 0$.

3. Gain defined as: $A = \frac{\Delta V_{PIN\ 1}}{\Delta V_{PIN\ 3}}$; $0 \leq V_{PIN\ 3} \leq 0.8\text{V}$.

Current-Mode PWM Controller

UC1842, UC2842, UC3842

UNDERVOLTAGE LOCKOUT

	UC1842
V_{ON}	16V
V_{OFF}	10V

**NOTE:**

During Undervoltage Lock-Out, the output driver is biased to a high impedance state. Pin 6 should be shunted to ground with a bleeder resistor to prevent activating the power switch with output leakage current.

ERROR AMP CONFIGURATION

**NOTE:**

Error AMP can source or sink up to 0.5mA.

Current-Mode PWM Controller

UC1842, UC2842, UC3842

CURRENT SENSE CIRCUIT

**NOTE:**Peak current (I_S) is determined by the formula:

$$I_S \text{ MAX} = \frac{1.0V}{R_S}$$

A small RC filter may be required to suppress switch transients.

OFF-LINE FLYBACK REGULATOR

TC11690S

SPECIFICATIONS

Input line voltage:	90V _{AC} to 130V _{AC}
Input frequency:	50 or 60Hz
Switching frequency:	40kHz ± 10%
Output power:	25W maximum
Output voltage:	5V ± 5%
Output current:	2 to 5A
Line regulation:	0.01%/V
Load regulation:	8%/A

Efficiency @ 25 W,

V_{IN} = 90V_{AC}: 70%V_{IN} = 130V_{AC}: 65%

Output short-circuit current: 2.5A average

NOTE:

This circuit uses a low-cost feedback scheme in which the DC voltage developed from the primary-side control winding is sensed by the UC1842 error amplifier. Load regulation is therefore dependent on the coupling between secondary and control windings, and on transformer leakage inductance. For applications requiring better load regulation, a UC1901 Isolated Feedback Generator can be used to directly sense the output voltage.
