

Avalanche Energy Rated N-Channel Power MOSFETs

2.0A and 2.5A, 450V-500V
 $r_{DS(on)} = 3.0\Omega$ and 4.0Ω

Features:

- Single pulse avalanche energy rated
- SOA is power-dissipation limited
- Nanosecond switching speeds
- Linear transfer characteristics
- High input impedance

TERMINAL DESIGNATION

JEDEC TO-220AB

The IRF820R, IRF821R, IRF822R and IRF823R are advanced power MOSFETs designed, tested, and guaranteed to withstand a specified level of energy in the breakdown avalanche mode of operation. These are n-channel enhancement-mode silicon-gate power field-effect transistors designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRF-types are supplied in the JEDEC TO-220AB plastic package.
