# Dual SMPTE 292M / 259M Serial Digital Cable Driver

### General Description

The LMH0202 Dual SMPTE 292M / 259M serial digital cable driver is a monolithic, high-speed cable driver designed for use in SMPTE 292M / 259M serial digital video and ITU-T G.703 serial digital data transmission applications. The LMH0202 drives 75Ω transmission lines (Belden 8281, Belden 1694A or equivalent) at data rates up to 1.485 Gbps.

The LMH0202 provides two selectable slew rates for SMPTE 259M and SMPTE 292M compliance. The output voltage swing is adjustable via a single external resistor.

The LMH0202 offers the flexibility to implement either dual differential inputs or a single differential input (externally routed via PCB) to dual differential outputs. The latter option provides an ideal solution for DVB-ASI applications where only the non-inverted outputs are typically used.

The LMH0202 is powered from a single 3.3V supply. Power consumption is typically 250mW in SD mode and 298mW in HD mode.

**Note 1:** "Absolute Maximum Ratings" are those parameter values beyond which the life and operation of the device cannot be guaranteed. The stating herein of these maximums shall not be construed to imply that the device can or should be operated at or beyond these values. The table of "Electrical Characteristics" specifies acceptable device operating conditions.

**Note 2:** Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to  $V_{EE} = 0$  Volts.

## Device Operation

### INPUT INTERFACING

The LMH0202 accepts either differential or single-ended input. The inputs are self-biased, allowing for simple AC or DC coupling. DC-coupled inputs must be kept within the specified common-mode range. SDI and  $\overline{SDI}$  are self-biased at approximately 2.1V with  $V_{CC} = 3.3V$ . Figure 1 shows the differential input stage for SDI and  $\overline{SDI}$ .

## Device Operation (Continued)

### DVB-ASI APPLICATIONS

The dual differential inputs of the LMH0202 may be externally routed to a single differential input as shown in *Figure 2*. This provides a solution for DVB-ASI applications where two non-inverted outputs are needed.

20173103

**FIGURE 2. Single Differential Input for DVB-ASI**

### OUTPUT INTERFACING

The LMH0202 uses current mode outputs. Single-ended output levels are 800 mV<sub>P-P</sub> into 75 Ω AC-coupled coaxial cable (with R<sub>REF</sub> = 750 Ω). Output level is controlled by the value of the resistor connected between the R<sub>REF</sub> pin and V<sub>CC</sub>.

The R<sub>REF</sub> resistor should be placed as close as possible to the R<sub>REF</sub> pin. In addition, the copper in the plane layers below the R<sub>REF</sub> network should be removed to minimize parasitic capacitance.

### OUTPUT SLEW RATE CONTROL

The LMH0202 output rise and fall times are selectable for either SMPTE 259M or SMPTE 292M compliance via the SD/H $\bar{D}$  pin. For slower rise and fall times, or SMPTE 259M compliance, SD/H $\bar{D}$  is set high. For faster rise and fall times, or SMPTE 292M compliance, SD/H $\bar{D}$  is set low.
