Bipolar Transistors

We offer one of the largest selection of small signal, RF and power transistors for demanding military, space and high reliability industrial applications. All devices are hermetically sealed in metal cans or ceramic packages.

All of SEMICOA's transistors are also available in die form for hybrid circuits. SEMICOA produces both proprietary and non-proprietary lines (Qualified Manufacturing Line/ Qualified Product Listing) of transistors that are sold directly to OEM's and through authorized distributors.

All of these products are DLA Land & Maritime certified, are mission critical electronic components for military and space programs specially designed and produced to perform in high temperature and radiation environments. SEMICOA supports numerous strategic aerospace, military and Hi Rel programs. Headquartered in Costa Mesa, California, SEMICOA has design, development, fabrication, assembly, and testing facilities in house. For over 43 years, SEMICOA has gained the reputation for quality, reliability and delivery.

Expertise

SEMICOA has assembled the industry's most experienced designers, engineers, production, packaging, quality control and sales people in the field of discrete power semiconductors. With the experience and knowledge of SEMICOA's team, we are YOUR technology partner. Let us help solve your product needs and solutions.

Certification & Quality

Our facility has achieved the highest U.S. government qualifications; JANS, MIL-PRF-19500, ISO 9001:2000 and AS 9100:2004 Rev C certification. SEMICOA maintains full documentation and process control including required compliance testing. Our Quality Assurance department coordinates all quality conformance inspections, and maintains lot histories for each product type.

Rad Hard MOSFETs

SEMICOA's long heritage providing radiation hardened technology and packaging allows this new product line to be used for satellite, launch vehicles and other applications where radiation could alter the performance of the device. Leveraging its leadership in the high-reliability arena, SEMICOA is providing customers an alternative source for radiation hardened power MOSFETs.

The new SEMICOA MOSFET Rad Hard roadmap provides products from 30 to 600 volts and radiation levels starting at 100 krad in various hermetic packages.

SEMICOA Rad Hard MOSFET line provides:

- A guarantee to meet Defense Logistics Agency (DLA) slash sheet specifications
- TID and SEE testing
- TO-205, TO-254, TO-257 through-hole and SMD-2, SMD-0.5 and UB surface mount packaging

SEMICOA goes above and beyond the requirements of MIL-PRF-19500 for qualifying semiconductors for Radiation Hardness Assurance (RHA). SEMICOA qualifies devices more in line with typical Military and Space Program requirements. For most parts we test a sample size of 11 devices per wafer, for larger die it is 5 per wafer, and we must meet not only the Group D end points but also the deltas between the Group A and Group D, as this is how much the part can shift just due to the effects of radiation. Also, we must meet these requirements with a level of statistical assurance to be considered RHA material. SEMICOA bases acceptance using a 0.99/90% statistical calculation; which means 99% of our RHA product with 90% confidence will meet these stringent requirements. This is the level of assurance you get when you purchase our RHA products and you get the data to back it up.

Military | Aerospace MOSFETs

Leveraging its leadership in the high-reliability arena, SEMICOA is addressing customers' performance and supply requirements with its first wave of power MOSFETs for military and aerospace applications. Through an aggressive product development roadmap and collaboration with customers, SEMICOA MOSFETs address a wide range of 30-600 volt JAN, JANTX, JANTXV and JANS applications.

SEMICOA MOSFETs build on proven gate architecture, providing:

- Low figure of merit [RDS(ON) X Qg]
- Guaranteed to meet Defense Logistics Agency (DLA) slash sheet specifications
- TO-254 and TO-205 hermetic packaging

Commercial MOSFETs

SEMICOA is a leading supplier of high-reliability discrete components for military and aerospace customers worldwide. Today, the company is building on its decades of delivering high-reliability, technology development with the introduction of a new wave of P-Channel and N-Channel Power MOSFETs for commercial applications.

Our new high reliability, discrete semiconductors offer distinct benefits to commercial and industrial customers concerned about achieving optimal power management, design robustness and long-term reliability.

Specifically, SEMICOA's proprietary gate architecture assures low leakage current, very low gate charge, ease of paralleling and fast switching times. These key features support the demanding requirements of Commercial-Industrial markets such as Energy Conversion, DC-DC & AC-DC Power Supplies, Motor Control, NetCom, Push-Pull Amplifiers and Lighting.

SEMICOA Power MOSFETs are provided in industry-standard commercial packages such as:

- TO-220
- TO-267
- TO-247
- QFN
- TO-251
- Power SOIC
- TO-252
- DPAK
- TO-263
- D²PAK
- TO-264
