## Small Surface-Mount IC-Output Photocouplers in the SO8 Package

Toshiba is expanding its portfolio of IC-output photocouplers in the small and thin SO8 package. To meet customer needs, Toshiba has released photocouplers featuring various data rates, dual-channel configurations and power device drivers.

Data rate (typ.)	Part Number	# of Circuits	Output	Supply Voltage
0.1 Mbit/s	<b>TLP2403</b>	1-ch	Darlington	Up to 18 V
1 Mbit/s	<b>TLP2404</b>	1-ch	Open-collector	4.5 V to 30 V
	<b>TLP2409</b>	1-ch		Up to 30 V
5 Mbit/s	<b>TLP2405</b>	1-ch	Totem-pole	4.5 V to 20 V
	<b>TLP2408</b>	1-ch		
	<b>TLP2105</b>	2-ch		
15 Mbit/s to 20 Mbit/s	<b>TLP2108</b>	2-ch	Totem-pole	3.3 V/5 V
	<b>TLP2466*</b>	1-ch		
	<b>TLP2160*</b>	2-ch	Open-collector	5 V
	<b>TLP2418</b>	1-ch		
	<b>TLP2118E</b>	2-ch	Open-collector	3.3 V/5 V
	<b>TLP2468*</b>	1-ch		
	<b>TLP2168*</b>	2-ch	Totem-pole	5 V
	<b>TLP2116</b>	2-ch		
<b>TLP2166A</b>	2-ch	Totem-pole	3.3 V	
50 Mbit/s	<b>TLP2467*</b>			1-ch
	<b>TLP2167*</b>	2-ch		
Driver Propagation Delay: 0.7 μs (max)	<b>TLP2451</b>	1-ch	±0.6-A peak current	10 V to 30 V
Driver Propagation Delay: 0.5 μs (max)	<b>TLP2451A*</b>	1-ch	±0.6-A peak current	10 V to 30 V

\*Under development. Specifications subject to change without notice. For the latest information, please contact your nearest Toshiba sales representative.

## IGBT/MOSFET Gate-Drive IC-Output Photocouplers with an Extended Operating Temperature Range

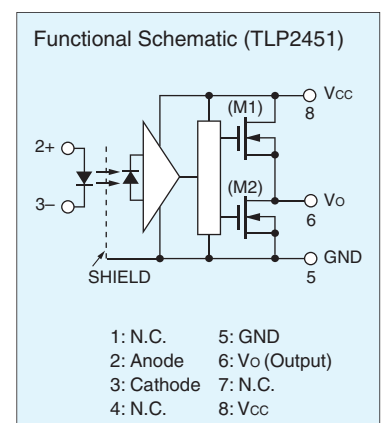

Printed circuit boards are becoming smaller and denser as a result of product miniaturization. This is driving the need for electronic components with an extended operating temperature range.

To meet this need, Toshiba has been expanding its portfolio of IC-output photocouplers that are guaranteed up to 125°C instead of the conventional 100°C limit.

- Wide packaging options: SO6, SO8, SDIP6, DIP8
- Key specifications are guaranteed over -40°C to 125°C (-40°C to 110°C for the TLP151)
- Low current consumption: I<sub>CC</sub> = 2 mA (max)

Peak Output Current	Part Number	Package	Supply Voltage (V <sub>CC</sub> )	Supply Current (I <sub>CC</sub> )	Input Threshold Current	Propagation Delay (max)	UVLO
±0.6 A	<b>TLP351H*</b>	DIP8	10 V to 30 V	2 mA (max)	5 mA (max)	700 ns	-
	<b>TLP701H*</b>	SDIP6					-
	<b>TLP2451</b>	SO8					-
	<b>TLP2451A*</b>	SO8				500 ns	-
	<b>TLP151*</b>	SO6				700 ns	-
±2.0 A	<b>TLP151A*</b>	SO6	15 V to 30 V			500 ns	-
	<b>TLP700H*</b>	SDIP6					Yes
±2.5 A	<b>TLP350H*</b>	DIP8					Yes

\*Under development. Specifications subject to change without notice. For the latest information, please contact your nearest Toshiba sales representative.

## General-Purpose 5-Mbit/s IC-Output Photocouplers

IC-output photocouplers with a data rate of 5 Mbits/s are beneficial for applications where the user needs a data rate that is not achievable with transistor-output photocouplers. In conjunction with various packaging options, the fast IC-output photocouplers simplify system design and provide extra performance for future upgrades.

- Packaging options: MFSOP6, SDIP6, SO8
- Available in positive and negative polarity versions.
- Key specifications guaranteed over  $-40^{\circ}\text{C}$  to  $100^{\circ}\text{C}$
- Low input current: 1.6 mA max (3 mA for the TLP715 and TLP718)
- Totem-pole output: Eliminates the need for an external load resistor.
- Wide supply voltage range: 4.5 V to 20 V
- Available in dual-channel versions (TLP2105/TLP2108)
- EN60747-5-2-certified

Package	Part Number	# of Channels	Logic Polarity
MFSOP6	TLP105	1-ch	Positive
	TLP108	1-ch	Negative
SDIP6	TLP715	1-ch	Positive
	TLP718	1-ch	Negative
SO8	TLP2405	1-ch	Positive
	TLP2408	1-ch	Negative
	TLP2105	2-ch	Positive
	TLP2108	2-ch	Negative

## IC-Output Photocouplers for IPM Drive Applications

Toshiba offers IC-output photocouplers ideal for IPM drive applications. Compared to the conventional TLP114A (IGM), these IC-output photocouplers provide shorter propagation delay times, a wider operating temperature range and digital output. Thus, they help to simplify system design and improve system performance. The TLP104 and TLP2404 in a small surface-mount package are now available in mass-production quantities, while those in the SDIP6 and DIP8 packages will shortly be available.

- Wide packaging options: SO6, SO8, SDIP6, DIP8
- Key specifications are guaranteed over  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .
- Low current consumption: 5 mA (max)
- Wide supply voltage range: 4.5 to 30 V
- Propagation delay times:  $t_{pHL} = 400$  ns (max),  $t_{pLH} = 550$  ns (max)
- Propagation delay skew:  $t_{pHL} - t_{pLH} = 400$  ns (max)

Part Number	Package	Feature
TLP104	SO6	Small surface-mount package with a 2.3-mm PCB mounted height (max)
TLP2404	SO8	Standard 8-pin small surface-mount package
TLP714*	SDIP6	Small surface-mount SDIP6 package
TLP754*	DIP8	Standard DIP8 package

\*Under development. Specifications subject to change without notice. For the latest information, please contact your nearest Toshiba sales representative.

## Photorelays in the Ultra-Small USOP4 Package: TLP33xx Series

There is a strong market need for smaller photorelays. To meet this need, Toshiba has developed photorelays in the ultra-small USOP4 package, which are suitable for high-density board assembly. These photorelays help to reduce system size and cost. They are ideal for use in small measuring instruments such as semiconductor testers that require numerous relays. The TLP3312 and TLP3375 provide well-balanced off-state voltage and on-state current, making them suitable not only for tester applications but also for various applications requiring high-density board assembly such as battery-controlled devices.

Part Number	Off-State Voltage (max)	On-State Current (max)	On-State Resistance (max)	Total Capacitance (typ.)	LED Trigger Current (max)
<b>TLP3312</b>	60 V	0.4 A	1.5 $\Omega$	20 pF	3 mA
<b>TLP3375</b>	50 V	0.3 A	1.5 $\Omega$	12 pF	3 mA

## High-ION Photorelays: TLP354x Series (Under Development)

Toshiba is now developing the TLP354x Series in the DIP6 package targeting applications that deal with relatively large current. Housed in the DIP6 package, the TLP354x photorelays allow B and C connections, enabling the switching of 8-A, 7-A, 6-A and 4-A dc current respectively. They are suitable for various applications such as factory equipment, power supplies and security systems.

Scheduled for mass production in April

Characteristic	Symbol	Unit	Available	Under Development			
			TLP3542	TLP3543	TLP3544	TLP3545	TLP3546
Package	-	-	DIP6				
Peak Off-State Voltage (min)	$V_{OFF}$	V	40	20	40	60	100
On-State Current (max)	$I_{ON}$	A	2.5	4	3.5	3	2
On-State Resistance (max)	$R_{ON}$	$m\Omega$	100	50	60	70	200
Isolation Voltage (min)	$B_{VS}$	$V_{rms}$	2500	2500	2500	2500	2500

\*Under development. Specifications subject to change without notice.

# 2 New Products

## General-Purpose Photorelays Certified for Reinforced Insulation: TLP220 Series and TLP221A (Under Development)

Toshiba is now developing the TLP220 Series and the TLP221 targeting factory equipment applications, and wattmeter and smart meter applications for the monitoring of electrical energy consumption. These photorelays meet the requirements for high isolation voltage between input and output, as well as for international safety standards certification. Housed in the DIP4 package, the new photorelays save board space and provide an isolation voltage of 5 kV. The TLP220 Series is available in versions with 60-V, 200-V, 350-V, 400-V and 600-V peak off-state voltages. The TLP221A provides a 60-V peak off-state voltage and a 1.5-A on-state current.

Scheduled for mass production in June to August

Characteristic	Symbol	Unit	Existing Photorelay Examples		Under Development					
			TLP222A	TLP222G	TLP220A	TLP220D	TLP220G	TLP220GA	TLP220J	TLP221A
Package	-	-	DIP4							
Peak Off-State Voltage (min)	V <sub>OFF</sub>	V	60	350	60	200	350	400	600	60
On-State Current (max)	I <sub>ON</sub>	A	0.5	0.12	0.5	0.25	0.1	0.12	0.09	1.5
On-State Resistance (max)	R <sub>ON</sub>	Ω	2	50	2	8	50	35	60	0.2
Isolation Voltage (min)	B <sub>VS</sub>	V <sub>rms</sub>	5000	5000	5000	5000	5000	5000	5000	5000

\*Under development. Specifications subject to change without notice.

## IC-Output Photocouplers in the SO6 Package Certified for Reinforced Insulation

Despite the same footprint size as the MFSOP6 package, the new SO6 package provides reinforced insulation, offering clearance and creepage distances of  $\geq 5$  mm; an internal isolation thickness of  $\geq 0.4$  mm; and an isolation voltage of 3750 V<sub>rms</sub>. Additionally, the SO6 features the maximum PCB mounted height of 2.3 mm, approximately 20% lower than the MFSOP6. This makes the photocouplers in SO6 ideal for low-profile applications.

- Clearance/creepage:  $\geq 5$  mm
- Thin package:  $\leq 2.3$  mm
- Internal Faraday shield:  $\geq 0.4$  mm
- Thin package:  $\leq 2.3$  mm

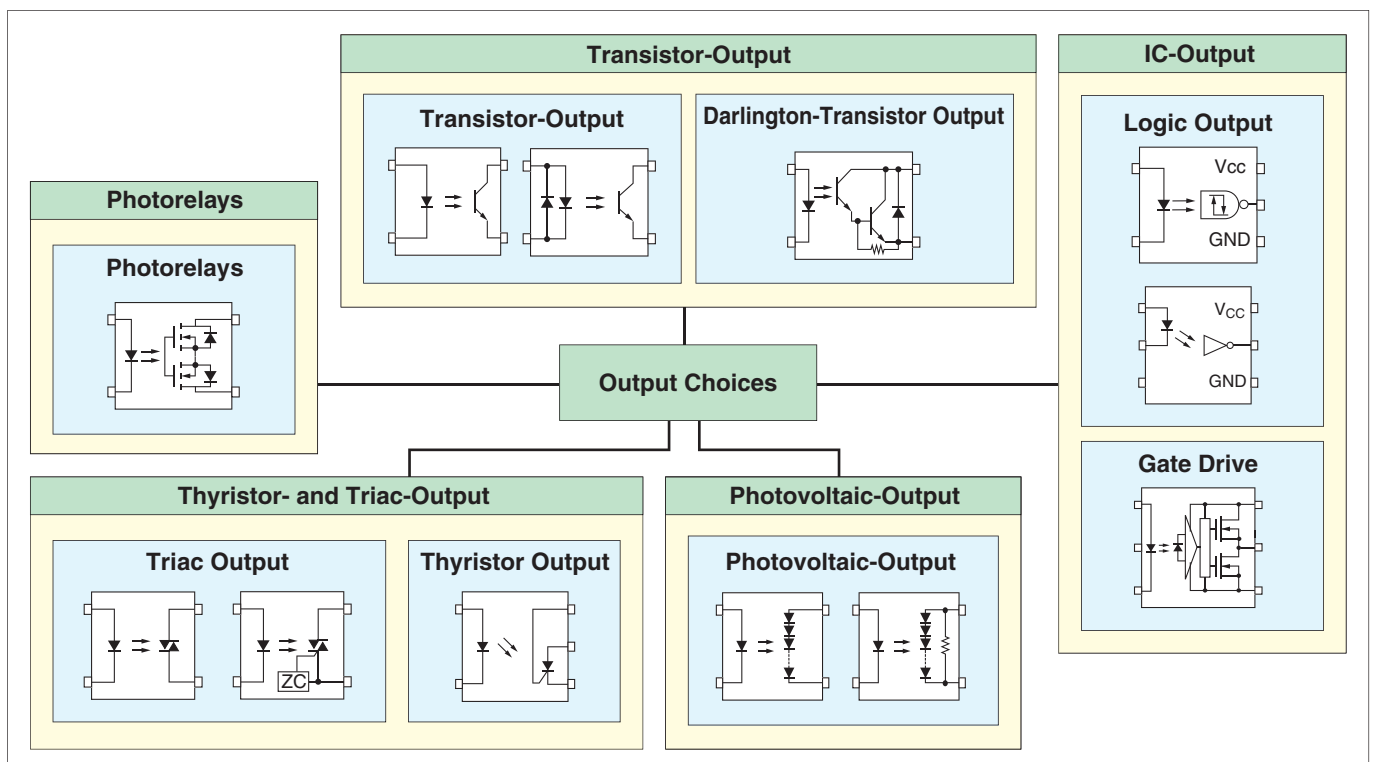

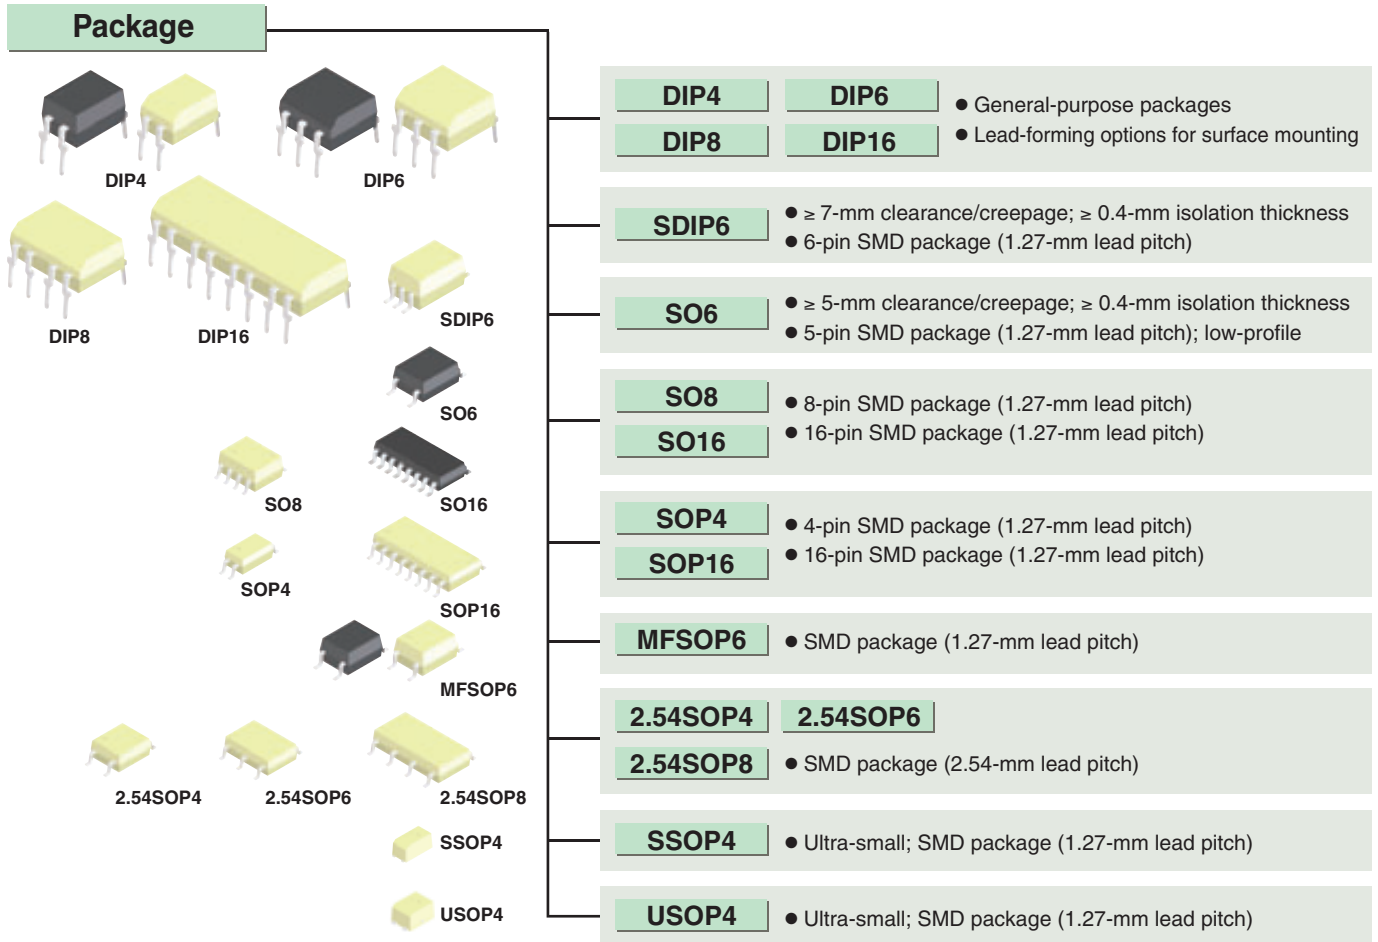

Part Number	Data rate (typ.)	Output	Supply voltage	Input Threshold Current (max)
TLP104	1 Mbit/s	Open-collector, optimized for IPM drive	4.5 V to 30 V	5 mA
TLP109	1 Mbit/s	Open-collector	4.5 V to 30 V	-
TLP116A	20 Mbit/s	Totem-pole inverting logic	5 V	5 mA
TLP2366*			3.3 V/5 V	5 mA
TLP118	20 Mbit/s	Open-collector inverting logic	5 V	5 mA
TLP2368*			3.3 V/5 V	5 mA
TLP2367*	50 Mbit/s	Totem-pole inverting logic	3.3 V/5 V	5 mA

\*Under development. Specifications subject to change without notice.

Note 1: The EN60747-5-2 safety standard for compact packages is different from that for standard DIP packages.

Since the mini-flat package is a compact package, please contact your nearest Toshiba sales representative for more details.

Note 2: BSI and IEC: ○: Approved (supplementary or basic insulation) ◎: Approved (reinforced insulation) △: Design which meets safety standard/approval pending as of January 2011  
EN 60065- and IEC 60065-approved, EN 60950- and IEC 60950-approved

TÜV and VDE: ○: Approved △: Design which meets safety standard/approval pending as of January 2011

EN 60747-5-2-approved with option V4 or D4

For the latest information, please contact your nearest Toshiba sales representative.

Note 3: Some CTR ranks may be limited in production quantities. For details, please contact your nearest Toshiba sales representative.

Note 4: Product manufactured by Toshiba Semiconductor (Thailand) Co., Ltd. [TST] is recommended. See page 38 for detail. Japan product is non-promotional item.

## Photocouplers for IGBT/MOSFET Gate Drive

Part Number	Pin Configuration	Features	Propagation Delay Time (Max)	Output	I <sub>FHL</sub> (Max)	BV <sub>s</sub>	Safety Standards <sup>(2)</sup>				
							UL/cUL	TÜV	VDE	BSI	IEC
TLP155E		<b>SO6</b> (reinforced Insulation) T <sub>opr</sub> = 100°C (max) Direct drive of a small-power IGBT/MOSFET	0.2 μs	Peak output current (max): ±0.6 A	7.5 mA	3750 Vrms	○/○		○		

\*Under development. Specifications subject to change without notice. For the latest information, please contact your nearest Toshiba sales representative.

Note 1: The EN60747-5-2 safety standard for compact packages is different from that for standard DIP packages.

Since the mini-flat package is a compact package, please contact your nearest Toshiba sales representative for more details.

Note 2: BSI and IEC: ○: Approved (supplementary or basic insulation) ◎: Approved (reinforced insulation) △: Design which meets safety standard/approval pending as of January 2011

EN 60065- and IEC 60065-approved, EN 60950- and IEC 60950-approved

TÜV and VDE: ○: Approved △: Design which meets safety standard/approval pending as of January 2011

EN 60747-5-2-approved with option V4 or D4

For the latest information, please contact your nearest Toshiba sales representative.

Some of the photocouplers with triac output are also manufactured by Toshiba Semiconductor Thailand Co., Ltd. For detailed information, please contact your nearest Toshiba sales representative.

# 4 Selection Guide

## Triac-Output Photocouplers

Part Number	Pin Configuration	Features	Tingger LED Current, I <sub>FT</sub>		Peak On-State Voltage, V <sub>TM</sub>		Off-State Output Terminal Voltage V <sub>DRM</sub>	BV <sub>s</sub> @ 1 Minute	Safety Standards <sup>(2)</sup>

 EN 60747-5-2-approved with option V4 or D4

For the latest information, please contact your nearest Toshiba sales representative.  
 Some of the photocouplers with triac output are also manufactured by Toshiba Semiconductor Thailand Co.,Ltd. For detailed information, please contact your nearest Toshiba sales representative.

# 5 Part Naming Conventions

## 1. Transistor-Output, Darlington-Transistor-Output and IC-Output Photocouplers

**TLP** □□□□ □ **F** (□□ - □□□□ - □□□□, □, **F**)

Part number → □□□□ □

Wide-spaced leads → □  
Specify this option, if necessary.

Safety standard option → □  
Specify either "D4" or "V4" for EN60747-5-2-approved devices.

CTR rank → □□□□ □

See respective datasheets.

Lead form option for DIP packages → □  
Select one of the lead form options shown on page 40.

Carrier tape option → □  
Select one of the carrier tape options shown on pages 51.

Revision code → , □ ,

RoHS COMPATIBLE\* → **F**

Example 1: **TLP781(D4-GB-TP6,F)**      Example 2: **TLP781F(GR,F)**

[D4] = EN60747-5-2 option              [F] = Wide-spaced leads  
[GB] = CTR rank                          [GR] = CTR rank  
[TP6] = LF6 lead form                   [.,F] = RoHS COMPATIBLE\*  
                         Tape-and-reel packing

[.,F] = RoHS COMPATIBLE\*

The right parenthesis is omitted due to the limit to the number of characters.

## 2. Triac-Output and Thyristor-Output Photocouplers

**TLP** □□□□ □ □ **F** (□□ - □□□□ - □□□□, □, **F**)

Part number → □□□□ □ □

V<sub>DRM</sub> → □  
G: 400 V  
J: 600 V  
L: 800 V

Wide-spaced leads → □

Safety standard option → □

I<sub>FT</sub> rank → □□□□ □  
No character: No I<sub>FT</sub> rank specified  
IFTx: For example, IFT5 denotes the 5-mA rank.  
The available I<sub>FT</sub> ranks differ from product to product.  
See datasheets.

Lead form option for DIP packages → □  
Carrier tape option → □

Revision code → , □ ,

RoHS COMPATIBLE\* → **F**

Example 3: **TLP361J(D4-IFT7-TP1,S,F)**      [IFT7] = [T7] = I<sub>FT</sub> = 7 mA  
**TLP361J(D4T7TP1S,F)**      [TP1] = LF1 lead form  
(Abbreviated due to the limit to      Tape-and-reel packing  
the number of characters.)      [.,S] = [S] = Revision code: S  
[J] = V<sub>DRM</sub>: 600 V      [.,F] = RoHS COMPATIBLE\*  
[D4] = EN60747-5-2 option

## 3. Photorelays

**TLP** □□□□ □ □ **F** (□□ - □□□□, □, **F**)

Part number → □□□□ □ □

V<sub>OFF</sub> → □  
A: 60 V  
D: 200 V  
G: 350 V  
GA: 400 V  
J: 600 V  
Some photorelays do not have a V<sub>OFF</sub> code in their names. See respective datasheets.

Wide-spaced leads → □

Safety standard option → □

Lead form option for DIP packages → □  
Carrier tape option → □

Revision code → , □ ,

RoHS COMPATIBLE\* → **F**

Example 4: **TLP227A(TP1,F)**      Example 5: **TLP3110(TP,F)**

[A] = V<sub>OFF</sub>: 60 V                          [TP] = Tape-and-reel packing  
[TP1] = LF1 lead form                          [.,F] = RoHS COMPATIBLE\*  
                         Tape-and-reel packing

[.,F] = RoHS COMPATIBLE\*

\*: "F" identifies the indication of product Labels with "[G]/RoHS COMPATIBLE".

Please contact your TOSHIBA sales representative for details as to environmental matters such as the RoHS compatibility of Product.

The RoHS is the Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

Note: The length of part names is limited to 18 characters. Longer names are abbreviated by omitting the "-" character and/or using shorthand symbols. However, be sure to give full part names when you have any inquiries. For details, please contact your nearest Toshiba sales representative.

# 6 Package Information

## 1 Lead Form Options for DIP Packages

The **DIP4**, **DIP6**, **DIP8** and **DIP16** packages offer three surface-mount lead form options and a wide-spaced lead form option. The electrical characteristics are identical, regardless of these options.

Lead Form	Surface-Mount			Wide-Spaced																																		
Appearance																																						
Lead Form Code	(LF1)	(LF4)	(LF5)	(LF2)																																		
Carrier Tape Code	(TP1)	(TP4)	(TP5)	Not available*																																		
Package Outlines	 <b>Dimensions</b> <span style="float: right;">Unit: mm</span> <table border="1" style="margin-top: 10px;"> <thead> <tr> <th rowspan="2">Version</th> <th colspan="2">(LF1)</th> <th colspan="2">(LF4)</th> <th colspan="2">(LF5)</th> </tr> <tr> <th>Min</th> <th>Max</th> <th>Min</th> <th>Max</th> <th>Min</th> <th>Max</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>–</td> <td>10.0</td> <td>–</td> <td>12.0</td> <td>–</td> <td>10.0</td> </tr> <tr> <td>B</td> <td colspan="2">(0.35 typ.)</td> <td colspan="2">(0.25 typ.)</td> <td>–</td> <td>0.2</td> </tr> <tr> <td>C</td> <td>6.4</td> <td>–</td> <td>8.0</td> <td>–</td> <td>6.4</td> <td>–</td> </tr> </tbody> </table> <p>All other package dimensions are the same as for each standard package specification.</p>			Version	(LF1)		(LF4)		(LF5)		Min	Max	Min	Max	Min	Max	A	–	10.0	–	12.0	–	10.0	B	(0.35 typ.) Version	(LF1)		(LF4)		(LF5)																																	
	Min	Max	Min	Max	Min	Max																																
A	–	10.0	–	12.0	–	10.0																																
B	(0.35 typ.)		(0.25 typ.)		–	0.2																																
C	6.4	–	8.0	–	6.4	–																																

\* Tape-and-reel packing is not available with (LF2).

Example 1: Standard part: TLP620(F)

Surface-mount option: TLP620(LF1,F): Packed in stick magazines (see page 49).

Surface-mount and tape-and-reel options: TLP620(TP1,F): Packed in tape-and-reel (see page 51).

- Standard part names should be used when applying for safety standard approval.
- The package dimensions and lead form options of the TLP781, TLP785 differ from those shown above. See the TLP781, TLP785 datasheet.

### 3 Rank Marking

Transistor-output photocouplers are ranked according to their CTR ranges, whereas thyristor-output and triac-output photocouplers are ranked according to their maximum I<sub>FT</sub> value. The following gives the rank classifications and rank marks printed on packages. Note that the rank classifications differ from product to product. For details, please refer to the relevant technical datasheets.

#### 1. CTR Rank Name and Rank Marking

Available CTR Rank Selection (○: Available, △: Contact Toshiba)

Part Number	Rank Name									Rank Marking Group
	None	GB	Y	GR	BL	YH	GRL	GRH	BLL	
TLP180	○	○	△	○	△					①
TLP181	○	○	○	○	○	△	△	△	△	②
TLP280	○	○	△	○	△					①

GRH	150 to 300%	G <sup>■</sup>	G+

\* Part Marking when No CTR Rank Is Specified

Part Number	None	Rank Marking Group	Part Number	None	Rank Marking Group
TLP180	Blank, YE, GR, BL, GB	①	TLP280-4	Blank, GB	③
TLP280					
TLP531/532					
TLP630					
TLP181	Blank, Y, Y <sup>■</sup> , YE, G, G <sup>■</sup> , GR, B, B <sup>■</sup> , BL, GB	②			
TLP281					
TLP531					
TLP621					
TLP631					
TLP632					
TLP731					
TLP732					
TLP733F					
TLP734F					

# 6 Package Information

## 2. LED Trigger Current (IFT) Ranking and Marking

Rank Name	IFT	IFT Rank Marking
None	IFT max	Blank, T7, T5
IFT7	7 mA max	T7, T5
IFT5	5 mA max	T5
IFT2	2 mA max	T2 (only for photorelays)

## 3. Marking Examples

(a) 4-pin mini-flat 1-channel type

T or  $\mathcal{F}$   
 Lot No.  
 P  
 CTR or IFT rank marking  
 Pin No. 1

(Example: **TLP626: P626**  
**TLP620: P620**  
**TLP181: P181**  **TLP620**)

(b) TLP421, TLP421F

Pin No. 1  
 Lot No. (Monthly code)  
 P 4 2 1 F  
 Lot No.  
 CTR rank marking

(c) TLP280, TLP281

Pin No. 1  
 CTR rank marking  
 P280  
 Part number (P280 or P281)  
 Lot No.

(d) Others

T or  $\mathcal{F}$   
 Lot No.  
 TLP  
 Part number  
 CTR or IFT rank marking  
 Pin No. 1

(Examples: **TLP620: TLP620**  
**TLP666GF: TLP666GF**  **TLP620**)

Note: When ordering a standard photocoupler, add a CTR or IFT rank in parentheses to the standard part number.

Examples: **TLP181(GB)** **TLP532(GR)**

Use the standard part number when applying for safety standard approval.

Example  $\frac{\text{Part number}}{\text{TLP181(GB)}} \rightarrow \frac{\text{Use this part number}}{\text{TLP181}}$

	B			ø80 ± 1		
	C			ø13 ± 0.5		
	E			2.0 ± 0.5		
	U			4.0 ± 0.5		
	W1	13.5 ± 0.5		17.5 ± 0.5		
	W2	17.5 ± 1.0		21.5 ± 1.0		

## 4. Other Packing Information

### a) Device orientation on tape

Photocouplers are oriented in cavity, as shown below.

Photocoupler Package Type	Tape Option
MFSOP6, SO6	TPR

A)

Photocoupler Package Type	Tape Option
MFSOP6, SO6	TPL
SOP4, 2.54SOP4	TP
SSOP4	TP15

B)

Photocoupler Package Type	Tape Option
SOP16, SO8	TP
2.54SOP6/8	TP
SDIP6	TP
DIP(LF1, LF5)	TP1, TP5
DIP(LF4)	TP4

C)

### b) Tape Specifications

#### Quantities Per Reel

Photocoupler Package Type	MFSOP6, SO6	SOP4, SO8	SOP16	2.54SOP4/6/8	SSOP4	SDIP6	SDIP6 F type	DIP(LF1, LF5)	DIP(LF4)
Quantity (pcs)	3000	2500	2500	2500	1500	1500	1000	1500	1000

#### Photocouplers Manufactured in Thailand

Photocoupler Package Type	MFSOP	DIP4/6(LF1,LF5)	DIP4/6(LF4)	DIP8(LF1,LF5)
Quantity (pcs)	3000	1500	1000	1000

#### Empty Cavities

Item	Specification	Note
Consecutive empty cavities	Zero	Any 40-mm portion of tape except leader and trailer.
Non-consecutive empty cavities	0.2% max/reel *2	Except leader and trailer.

\*2: 6 pcs max/reel for DIP and SDIP packages

### c) Packing boxes

One or five reels per box  
Two or five reels per box for photocouplers manufactured in Thailand

### d) Label

The reel label includes the following information:  
1. Part number 2. Tape type 3. Quantity 4. Lot number

### e) Purchase order

Specify the part number, tape and quantity as follows.

Example TLP181(GB-TPR, F) 3000 units

\*1: Must be a multiple of the quantity per-reel.

\*2: "F" identifies the indication of product Labels with "[G]/RoHS COMPATIBLE".

Please contact your TOSHIBA sales representative for details as to environmental matters such as the RoHS compatibility of Product. The RoHS is the Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

# 8 Board Assembly

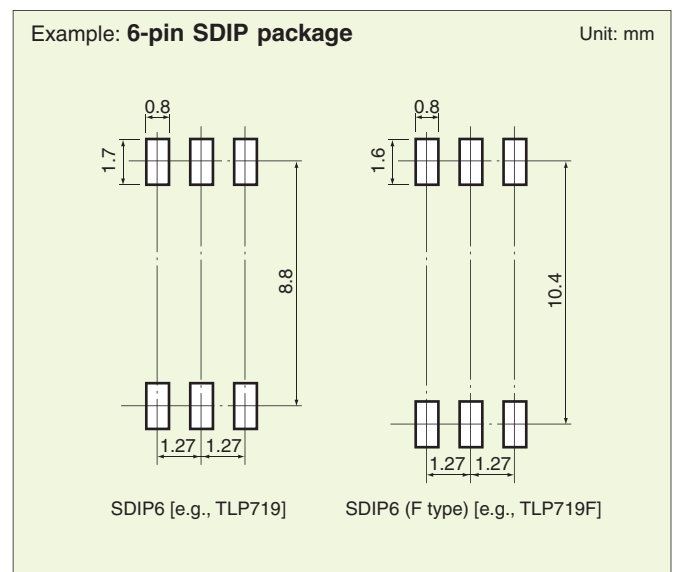

## 1 Example Land Patterns

Below are the example land patterns for surface-mount packages.

### Mini-flat and SOP couplers

### Surface-Mount Lead-Formed Photocouplers

## 2 Board Assembly Considerations

### 1. Soldering

When using a soldering iron or medium infrared ray/hot air reflow, avoid a rise in device temperature as much as possible by observing the following conditions.

#### 1.1) Using a soldering iron

- Solder once within 10 seconds for a lead temperature of up to 260°C.
- Solder once within 3 seconds for a lead temperature of up to 350°C.

#### 1.2) Using medium infrared ray/hot air reflow

- Complete the infrared ray/hot air reflow process at once within 30 seconds at a package surface temperature between 210°C and 240°C.
- Example of temperature profile of lead (Pb) solder

Example of temperature profile of lead (Pb) solder

- Example of temperature profile of lead (Pb)-free solder

The profile below shows only the typical temperature profile and conditions, which might not apply to all Toshiba photocouplers. Temperature profiles and conditions may differ from product to product. Refer to the relevant technical datasheets and databooks when mounting a device.

Example of temperature profile of lead (Pb)-free solder

- Precautions for heating

Keeping packages at high temperature for a long period of time can degrade the quality and reliability of devices. Soldering time has to be kept as short as possible to avoid a rise in package temperature.

When using a halogen lamp or infrared heater, avoid direct irradiation of packages, since this may cause a rise in package temperature.

#### 1.3) Dip soldering (flow soldering)

The thermal shock of dip soldering increases thermal stress on devices. To avoid stress, the use of a soldering iron or medium infrared ray/hot air reflow is recommended. If you want to use dip soldering, contact your nearest Toshiba sales representative.

### 2. Flux Cleaning

- When cleaning circuit boards to remove flux, make sure that no residual reactive ions such as sodium(Na<sup>+</sup>) or chloride(Cl<sup>-</sup>) ions remain. Note that organic solvents react with water to generate hydrogen chloride and other corrosive gases, which can degrade device performance.
- Washing devices with water will not cause any problems. However, make sure that no reactive ions such as sodium(Na<sup>+</sup>) or chloride(Cl<sup>-</sup>) ions are left as residue. Also, be sure to dry devices sufficiently after washing.
- Do not rub device markings with a brush or with your hand during cleaning or while the devices are still wet from the cleaning agent. Doing so can rub off the markings.
- Dip cleaning, shower cleaning and steam cleaning processes all involve the chemical action of a solvent. Use only recommended solvents for these cleaning methods. When immersing devices in a solvent or steam bath, make sure that the temperature of the liquid is 50°C or below and that the circuit board is removed from the bath within one minute.
- If a device package allows ultrasonic cleaning, keep the duration of ultrasonic cleaning as short as possible, since long hours of ultrasonic cleaning degrade the adhesion between the mold resin and the frame material.

#### The following ultrasonic cleaning conditions are recommended.

Frequency: 27 kHz to 29 kHz

Ultrasonic output power: 300 W or less (0.25 W/cm<sup>2</sup> or less)

Cleaning time: 30 seconds or less

Suspend the circuit board in the solvent bath during ultrasonic cleaning in such a way that the ultrasonic vibrator does not come into direct contact with the circuit board or the device.

Conventional cleaning solvents that contain freon are not recommended due to its adverse effect on the earth's ozone layer. Alternative freon-free products are available on the market. Some of these alternative cleaning agents are listed in the table below. Contact Toshiba or a Toshiba distributor regarding cleaning conditions and other relevant information for each product type.

#### Examples of Alternative Cleaning Agents

Technocare	FRW-1, FRW-17, FRV-100	GE Toshiba Silicon
Asahi Clean	AK-225AES	Asahi Glass Co., Ltd
Clean Through	750H	Kao Co., Ltd.
Pine Alpha	ST-100S, ST-100SX	Arakawa Chemical Co., Ltd.

# 9 Device Degradation

## 1 Projected Operating Life Based on LED Light Output Degradation

Toshiba photocouplers use one of four types of LEDs and a projection of the operating life has been made for each LED. The table on page 57 shows the types of LED used in photocouplers and the figures on pages 58 to 60 show projections of long-term light output performance and operating life. Note that these operating life data are estimates extrapolated from long-term light output degradation over a single wafer lot and are shown as reference only.

	Projected Operating Life ( $T_a = 40^\circ\text{C}$ , $I_F = 20\text{ mA}$ , failure criteria: degradation rate $\Delta P_o < -50\%$ )		Photocouplers
	F50% operating life	F0.1% operating life	
① GaAs LED	1,300,000 h	260,000 h	Mainly for phototransistor output devices and phototriac output devices
② GaAlAs(SH) LED	540,000 h	100,000 h	Mainly for photo-IC couplers
③ GaAlAs(DH) LED	1,000,000 h	200,000 h	Mainly for photorelays (MOSFET output), photovoltaic couplers and photo-IC couplers
④ GaAlAs(MQW) LED	Ask your local Toshiba sales representative.		Mainly for photo-IC couplers

F50% (cumulative failure rate 50%) operating life: Time period until the projected long-term light output degradation curve of the average light output change ( $\bar{X}$ ) shown on pages 58 to 60 reaches the failure criteria.

F0.1% (cumulative failure rate 0.1%) operating life: Time period until the projected long-term light output degradation curve of  $\bar{X} - 3\sigma$  shown on pages 58 to 60 reaches the failure criteria.

The relationship between LED light output degradation and optical coupling characteristics is shown below.

- (1) The relationship between LED light output degradation and current transfer ratio (CTR)/short circuit current ( $I_{sc}$ ) is 1:1.

$$\frac{CTR(t)}{CTR(o)} = \frac{P_o(t)}{P_o(o)}$$

- (2) The relationship between a reciprocal value of LED light output degradation and  $I_{FT}/I_{FLH}/I_{FHL}/I_{FH}$  change is 1:1.

$$\frac{I_{FT}(t)}{I_{FT}(o)} = \left( \frac{P_o(t)}{P_o(o)} \right)^{-1}$$

## LEDs Used in Photocouplers

LED: ① GaAs LED ② GaAlAs (SH) LED ③ GaAlAs (DH) LED ④ GaAlAs (MQW) LED

# 9 Device Degradation

## ① GaAs LED Projected Light Output Degradation Data

## ① GaAs LED Projected Operating Life Data

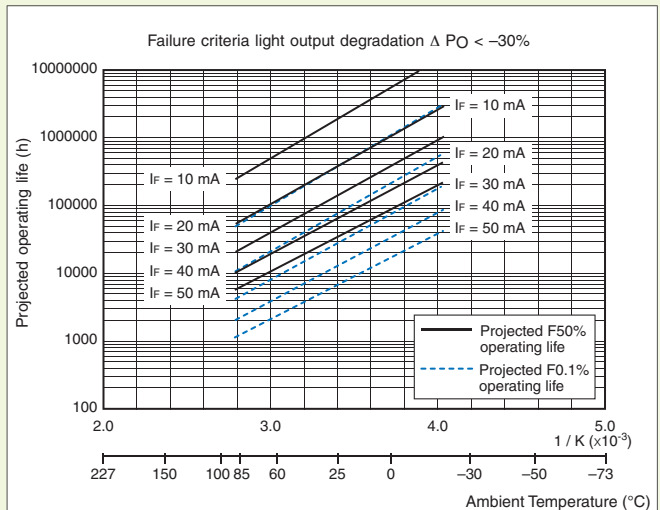

The above operating life data are estimates extrapolated from long-term light output degradation over a single wafer lot and are shown as reference only. Operating conditions exceeding the maximum ratings are not guaranteed.

## ② GaAlAs (SH) LED Projected Light Output Degradation Data

## ② GaAlAs (SH) LED Projected Operating Life Data

The above operating life data are estimates extrapolated from long-term light output degradation over a single wafer lot and are shown as reference only. Operating conditions exceeding the maximum ratings are not guaranteed.

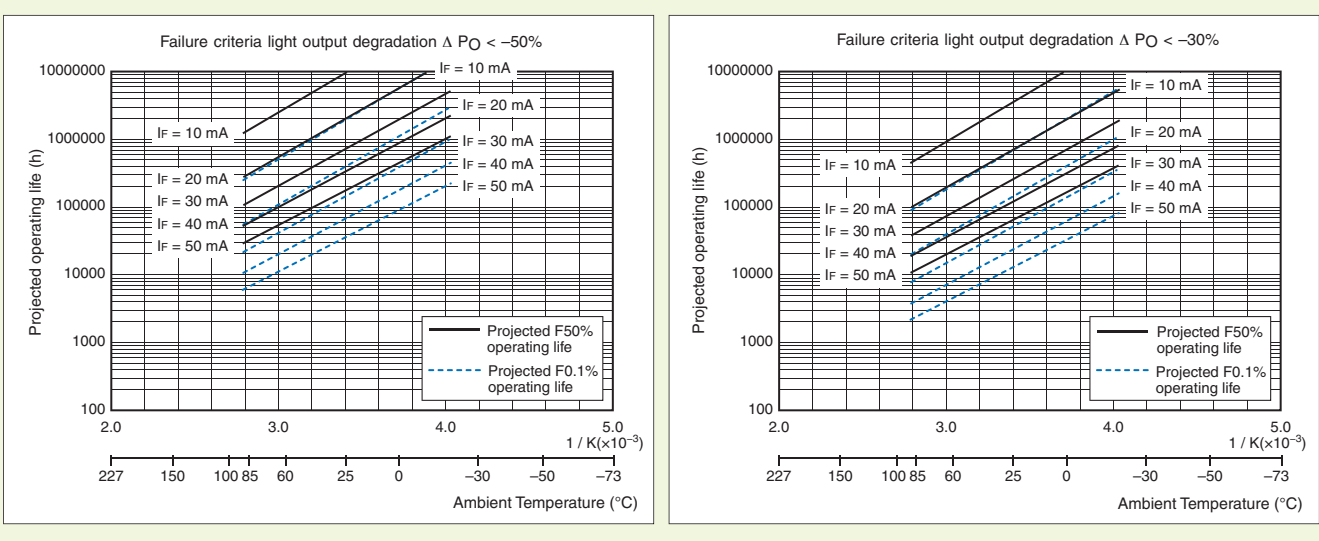

# 9 Device Degradation

## ③ GaAlAs (DH) LED Projected Light Output Degradation Data

## ③ GaAlAs (DH) LED Projected Operating Life Data

The above operating life data are estimates extrapolated from long-term light output degradation over a single wafer lot and are shown as reference only. Operating conditions exceeding the maximum ratings are not guaranteed.

# 9 Device Degradation

## Reading the Projected LED Operating Life Graph

For example, let's calculate the operating life of the GaAs LED, based on the data shown on page 60.

Here is an example of how to read an operating life, assuming that the ambient temperature ( $T_a$ ) is 40°C and that the failure criterion is a 30% decrease in light output.

Suppose that the initial LED current,  $I_F$ , is 20 mA. Since the horizontal axis of the failure criteria graph is the reciprocal of absolute temperature, it is necessary to convert the ambient temperature ( $T_a$ ) to the reciprocal of absolute temperature ( $T$ ):

$$T = \frac{I}{T_a + 273.15} = \frac{I}{40 + 273.15} \doteq 3.19 \times 10^{-3}$$

The graph shows the projected lifetimes for F50% and F0.1% cumulative failure probabilities in solid and dashed lines respectively. Normally, it is recommended to use F0.1% lines.

As  $X = 3.19$ , its intersection with the  $I_F = 20$  mA line for F0.1% is approximately 80,000 hours. (This figure is for reference only.)

You can also estimate the projected operating life from the projected light output degradation data.

# 10 Safety Standard Approvals

Toshiba offers a wide selection of photocouplers with a transistor output, IC output, thyristor output and triac output, as well as photorelays certified to UL (USA), cUL (Canada), VDE (Germany), BSI (Britain) and SEMKO (Sweden).

# 11 Photocoupler Application Circuit Examples

## 1 Digital Interface Applications

### High Speed

The **TLP2601** allows high-speed data transmission at up to approximately 5 MHz.

Data rate of left-side circuit

$f$  (typ.): 5 Mbit/s (duty cycle  $\approx$  1/2)

### Low Input Current Drive

The high-CTR (current transfer ratio) **TLP553** allows operation with low input current (0.5 mA) and direct driving with a CMOS signal.

Data rate of left-side circuit

$f$  (typ.): 50 kbit/s (duty cycle  $\approx$  1/2)

### No Pull-up Resistor Required

When the **TLP2200** with a 3-state output is used, the next-stage logic gate can be actuated without using a pull-up resistor.

Data rate of left-side circuit

$f$  (typ.): 1 Mbit/s (duty cycle  $\approx$  1/2)

### High Vcc Tolerance

By using the **TLP558** which tolerates  $V_{cc}$  up to 20 V, CMOS logic gates and other components can be driven without design restrictions on  $V_{cc}$ .

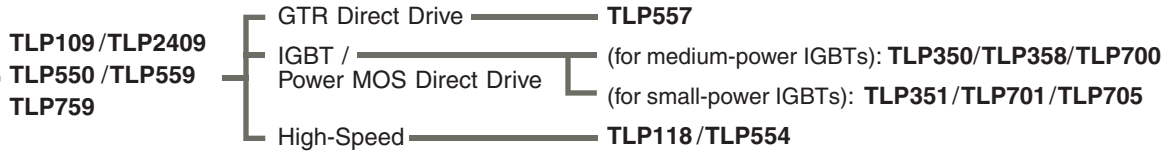

Data rate of left-side circuit

$f$  (typ.): 1 Mbit/s (duty cycle  $\approx$  1/2)

	2.54SOP8 (Dual)	<b>TLP200D**</b>	<b>TLP202G*</b>	<b>TLP206G*</b>		

## 9 Photovoltaic Coupler Applications

This is the simplest power MOSFET drive circuit. The resistor  $R_{SH}$  for discharging the gate capacitor reduces turn-off time.  $R_{SH}$  is not required for the TLP591B, which has a built-in resistor. ( $T_{ON}$ ,  $T_{OFF} \approx$  several ms)

Both AC and DC drivers become possible by connecting power MOSFETs in a common-source configuration.

Photovoltaic couplers in a parallel-serial configuration convert AC power to DC without a transformer. This type of configuration requires tens to hundreds of photovoltaic couplers.
