## 5,000 Watt Transient Voltage Suppressor (TVS) Protection Device

Screening in reference to MIL-PRF-19500 available

## DESCRIPTION

This Transient Voltage Suppressor series M5KP5.0A - M5KP110CA provides a range of standoff voltage options from 5.0 to 110 V in unidirectional, bidirectional, RoHS compliant, and SnPb solder dipped options. Multiple advanced screening levels are available for enhanced reliability. Clamping action is almost instantaneous. As a result, they provide effective protection from ESD or EFT per IEC61000-4-2 and IEC61000-4-4, as well as transients caused by inductive switching and RFI. They also protect from secondary lightning effects per 61000-4-5 at the class levels specified below.

## PART NOMENCLATURE

| SYMBOLS \& DEFINITIONS |  |
| :---: | :---: |
| Symbol | Definition |
| $\alpha_{V(B R)}$ | Temperature Coefficient of Breakdown Voltage: The change in breakdown voltage divided by the change in temperature that caused it expressed in $\% /{ }^{\circ} \mathrm{C}$ or $\mathrm{mV} /{ }^{\circ} \mathrm{C}$. |
| $\mathrm{V}_{\text {w }}$ | Working Standoff Voltage: The maximum-rated value of dc or repetitive peak positive cathode-to-anode voltage that may be continuously applied over the standard operating temperature. |
| PPP | Peak Pulse Power. The rated random recurring peak impulse power or rated nonrepetitive peak impulse power. The impulse power is the maximum-rated value of the product of $I_{P P}$ and $V_{C}$. |
| $V_{\text {(BR) }}$ | Breakdown Voltage: The voltage across the device at a specified current $\mathrm{I}_{(\mathrm{BR})}$ in the breakdown region. |
| ID | Standby Current: The current through the device at rated stand-off voltage. |
| IPP | Peak Impulse Current: The maximum rated random recurring peak impulse current or nonrepetitive peak impulse current that may be applied to a device. A random recurring or nonrepetitive transient current is usually due to an external cause, and it is assumed that its effect will have completely disappeared before the next transient arrives. |
| $\mathrm{V}_{\mathrm{c}}$ | Clamping Voltage: The voltage across the device in a region of low differential resistance during the application of an impulse current (l $l_{\mathrm{PP}}$ ) for a specified waveform. |
| $\mathrm{I}_{\text {(BR) }}$ | Breakdown Current: The current used for measuring Breakdown Voltage $\mathrm{V}_{(\mathrm{BR})}$. |

## NOTES:

1. Transient voltage suppressors are normally selected with reverse "stand-off voltage" (Vwm) which should be equal to or greater than the dc or continuous peak operating voltage level.
2. For the bidirectional M5KP5.0CA double the Io maximum standby current to $4000 \mu \mathrm{~A}$.
