

**DESCRIPTION**

This SMBJP6KE and SMBGP6KE series is an economical surface mount version of the popular P6KE axial-leaded series of 600 W Transient Voltage Suppressors (TVSs). It is available in both unidirectional and bi-directional configurations for protecting voltage-sensitive components from destruction or degradation. Response time of clamping action is virtually instantaneous. As a result, they may also be used effectively for protection from ESD or EFT per IEC61000-4-2 and IEC61000-4-4 or for inductive switching environments and induced RF. They can also be used for protecting other sensitive components from secondary lightning effects per IEC61000-4-5 and class levels defined herein. Microsemi also offers numerous other TVS products to meet higher and lower power demands and special applications.

**IMPORTANT:** For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

**APPEARANCE**

**NOTE:** All SMB series are equivalent to prior SMS package identifications.
