MOTOROLA Semiconductors

NPN 2N3773 PNP 2N6609

COMPLEMENTARY SILICON POWER TRANSISTORS

The 2N3773 and 2N6609 are EPI-BASE▲ power transistors designed for high power audio, disk head positioners and other linear applications. These devices can also be used in power switching circuits such as relay or solenoid drivers, dc to dc converters or inverters.

- High Safe Operating Area (100% Tested)
  150 W @ 100 V
- Completely Characterized for Linear Operation
- High DC Current Gain and Low Saturation Voltage
  h_{fe} = 15 (Min) @ 8 A, 4 V
  $V_{CE(sat)}$ = 1.4 V (Max) @ I_C = 8 A, I_B = 0.8 A
- For Low Distortion Complementary Designs

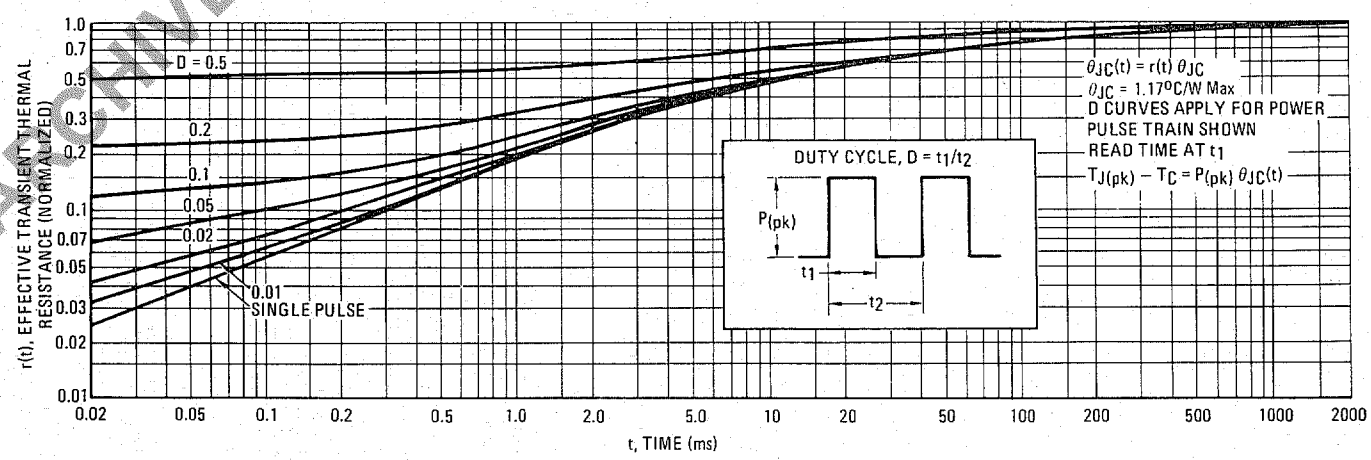

FIGURE 12 – FORWARD BIAS SAFE OPERATING AREA

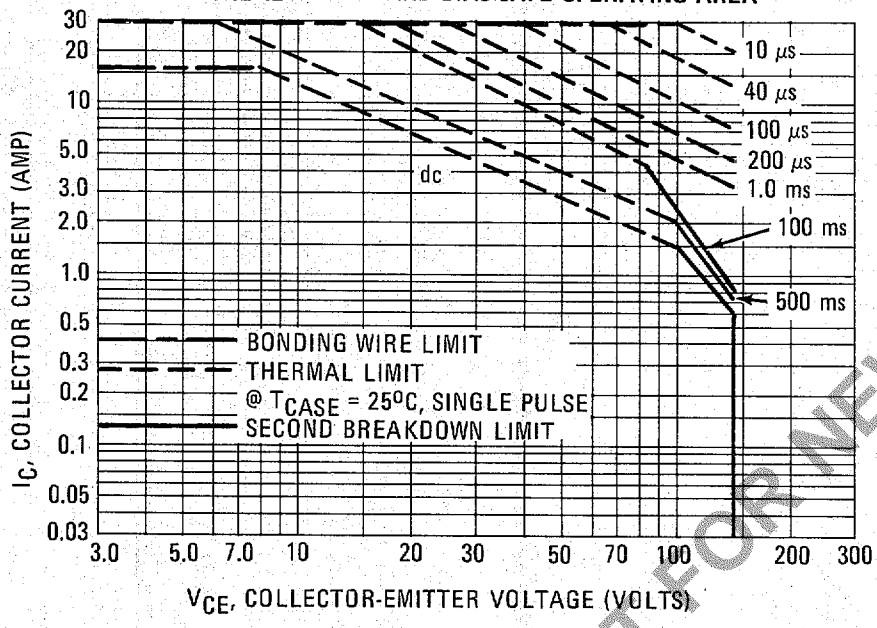

There are two limitations on the powerhandling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate $I_C - V_{CE}$ limits of the transistor that must be observed for reliable operation: i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figure 12 is based on $T_{J(pk)} = 200^oC$; T_C is variable depending on conditions. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(pk)} < 200^oC$. At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown (see AN-415A).
