SENSITIVE HALL-EFFECT SWITCHES FOR HIGH-TEMPERATURE OPERATION

Dwg. PH-003A

Pinning is shown viewed from branded side.

ABSOLUTE MAXIMUM RATINGS at $T_A = +25^\circ\text{C}$

| | |
|--|-----------------|
| Supply Voltage, V_{CC} | 28 V |
| Reverse Battery Voltage, V_{RCC} | -35 V |
| Magnetic Flux Density, B | Unlimited |
| Output OFF Voltage, V_{OUT} | 28 V |
| Reverse Output Voltage, V_{OUT} | -0.5 V |
| Continuous Output Current, I_{OUT} | 25 mA |
| Operating Temperature Range, T_A | |
| Suffix 'E-' | -40°C to +85°C |
| Suffix 'L-' | -40°C to +150°C |
| Storage Temperature Range, | |
| T_S | -65°C to +170°C |

These Hall-effect switches are monolithic integrated circuits with tighter magnetic specifications, designed to operate continuously over extended temperatures to +150°C, and are more stable with both temperature and supply voltage changes. The unipolar switching characteristic makes these devices ideal for use with a simple bar or rod magnet. The four basic devices (3141, 3142, 3143, and 3144) are identical except for magnetic switch points.

Each device includes a voltage regulator for operation with supply voltages of 4.5 to 24 volts, reverse battery protection diode, quadratic Hall-voltage generator, temperature compensation circuitry, small-signal amplifier, Schmitt trigger, and an open-collector output to sink up to 25 mA. With suitable output pull up, they can be used with bipolar or CMOS logic circuits. The A3141- and A3142- are improved replacements for the UGN/UGS3140-; the A3144- is the improved replacement for the UGN/UGS3120-.

The first character of the part number suffix determines the device operating temperature range. Suffix 'E-' is for the automotive and industrial temperature range of -40°C to +85°C. Suffix 'L-' is for the automotive and military temperature range of -40°C to +150°C. Three package styles provide a magnetically optimized package for most applications. Suffix '-LT' is a miniature SOT89/TO-243AA transistor package for surface-mount applications; suffix '-U' is a three-lead plastic mini-SIP, while suffix '-UA' is a three-lead ultra-mini-SIP.

FEATURES and BENEFITS

- Superior Temp. Stability for Automotive or Industrial Applications
- 4.5 V to 24 V Operation ... Needs Only An Unregulated Supply
- Open-Collector 25 mA Output ... Compatible with Digital Logic
- Reverse Battery Protection
- Activate with Small, Commercially Available Permanent Magnets
- Solid-State Reliability
- Small Size
- Resistant to Physical Stress

The A3141xU, A3142xU, and A3143xU are last-time buy.

Orders accepted until October 28, 2002.

Always order by complete part number, e.g., **A3141ELT**.

| | A3141- | | | A3142- | | | A3143- | | | A3144- | | |
| | Min. | Typ. | Max. | Min. | Typ. | Max. | Min. | Typ. | Max. | Min. | Typ. | Max. |
| B_{OP} at $T_A = 25^\circ\text{C}$ | 50 | 100 | 160 | 130 | 180 | 230 | 220 | 280 | 340 | 70 | — | 350 |
| over operating temp. range | 30 | 100 | 175 | 115 | 180 | 245 | 205 | 280 | 355 | 35 | — | 450 |
| B_{RP} at $T_A = 25^\circ\text{C}$ | 10 | 45 | 130 | 75 | 125 | 175 | 165 | 225 | 285 | 50 | — | 330 |
| over operating temp. range | 10 | 45 | 145 | 60 | 125 | 190 | 150 | 225 | 300 | 25 | — | 430 |
| B_{hys} at $T_A = 25^\circ\text{C}$ | 20 | 55 | 80 | 30 | 55 | 80 | 30 | 55 | 80 | 20 | 55 | — |
| over operating temp. range | 20 | 55 | 80 | 30 | 55 | 80 | 30 | 55 | 80 | 20 | 55 | — |

NOTES: Typical values are at $T_A = +25^\circ\text{C}$ and $V_{CC} = 8\text{ V}$.

B_{OP} = operate point (output turns ON); B_{RP} = release point (output turns OFF); B_{hys} = hysteresis ($B_{OP} - B_{RP}$).

1 gauss (G) is exactly equal to 0.1 millitesla (mT).

*Complete part number includes a suffix to identify operating temperature range (E- or L-) and package type (-LT, -U, or -UA).

OPERATION

The output of these devices (pin 3) switches low when the magnetic field at the Hall sensor exceeds the operate point threshold (B_{OP}). At this point, the output voltage is $V_{OUT(SAT)}$. When the magnetic field is reduced to below the release point threshold (B_{RP}), the device output goes high. The difference in the magnetic operate and release points is called the hysteresis (B_{HYS}) of the device. This built-in hysteresis allows clean switching of the output even in the presence of external mechanical vibration and electrical noise.

Extensive applications information for Hall-effect sensors is available in:

- *Hall-Effect IC Applications Guide*, Application Note 27701;
- *Hall-Effect Devices: Soldering, Gluing, Potting, Encapsulating, and Lead Forming*, Application Note 27703.1;
- *Soldering of Through-Hole Hall-Sensor Devices*, Application Note 27703; and
- *Soldering of Surface-Mount Hall-Sensor Devices*, Application Note 27703.2.
