### DESCRIPTION

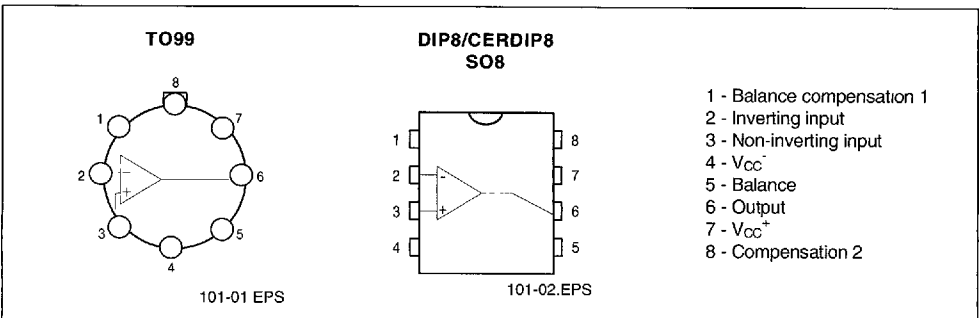

The LM101A is a general-purpose operational amplifier. This amplifier offers many features : supply voltages from  $\pm 5$  V to  $\pm 22$  V, low current drain, overload protection on the input and output, no latch-up when the common-mode range is exceeded, freedom from oscillations and compensation with a single 30pF capacitor. It has advantages over internally compensated amplifiers in that the compensation can be tailored to the particular application : slew rates of 10 V/μs and bandwidths of 3.5MHz can be easily achieved.
