### Description

This new series of low charge HEXFET® power MOSFETs achieve significant lower gate charge over conventional MOSFETs. Utilizing the new LCDMOS (low charge device MOSFETs) technology, the device improvements are achieved without added product cost, allowing for reduce gate drive requirements and total system savings. In addition, reduced switching losses and improved efficiency and achievable in a variety of high frequency applications. Frequencies of a few MHz at high current are possible using the new low charge MOSFETs.

These device improvements combined with the proven ruggedness and reliability that characterize of HEXFET power MOSFETs offer the designer a new power transistor standard for switching applications.
