

RoHS compliant

### FEATURES

#### 1. Now even more miniature.

The new thin type cuts 35% from the thickness of the previous short type. Device installing is now easier than ever.

#### 2. Certain detection unaffected by the reflectance of the object

The sensor can provide stable detection that is not affected by the condition (color or material of the clothing) or parts (skin, hair, etc.) of the object being monitored. (Reflectance 18% to 90%). Excellent performance even when the detection surface is dirty.

#### 3. Only connecting DC power supply for operating

Built-in oscillation circuit type obviates the hitherto existing need for start signal input.

#### 4. Use in adjacent positions is possible

These sensors can be located in adjacent positions, because the timing of the external trigger signals can be adjusted so that the beam frequency of each adjacent sensor will not interfere with the other.

### APPLICATIONS

#### 1. Water-based product market

- Automatic lighting of wash basin units
- Toilets

#### 2. Stores and financial instructions

- Automatic doors
- Automatic lighting
- Cash dispensing machines
- Automatic teller machines
- Visitor detecting sensors

#### 3. Amusement market

- Automatic lighting for game display

#### 4. Medical field

- Non-contact switch

Items			Symbol	Thin short type Note 1		Short type	Middle type	Long type	Measured conditions	
				NPN output type	PNP output type					
Rated operating voltage			Minimum	Vdd	5V DC type: 4.5V/Free-ranging type: 5.5V					
			Typical		—					
			Maximum		5V DC type: 5.5V/Free-ranging type: 27V					
Average current consumption	Without trigger input	Output OFF	Minimum	Ib	—			Note 2: *b		
			Typical		0.1m	5V DC type: 0.1mA/Free-ranging type: 1.0mA				
			Maximum		0.3m	5V DC type: 0.3mA/Free-ranging type: 1.8mA				
		Output ON	Minimum		—					
			Typical		2.6mA	6.7mA	5V DC type: 0.5mA/Free-ranging type: 1.4mA		Note 2: *d	
			Maximum		6.6mA	9.6mA	5V DC type: 3.4mA/Free-ranging type: 4.5mA			
	With trigger input	Output OFF	Minimum	Ia	—			Note 2: *a		
			Typical		2.2mA	5V DC type: 2.2mA/Free-ranging type: 3.1mA				
			Maximum		6.2mA	5V DC type: 6.2mA/Free-ranging type: 7.2mA				
		Output ON	Minimum		—					
			Typical		4.2mA	8.5mA	5V DC type: 2.4mA/Free-ranging type: 3.3mA		Note 2: *c	
			Maximum		8.2mA	12.5mA	5V DC type: 8.2mA/Free-ranging type: 9.3mA			
Measuring cycle (Trigger interval)			Minimum	Tt	5ms/cycle					
External trigger	Pulse width	Minimum	Tw	20μs			Half off the distance period			
		Maximum		1/2Tt						
	Level	Maximum	V <sub>TL</sub>	0.8V						
		Minimum	V <sub>TH</sub>	3V			Note 3			
Response performance: time from trigger pulse fall to detection output			Maximum	Tr	5ms					
Output characteristics	Remain voltage	Maximum	Vr	1 V DC	1.2 V DC	1 V		I = 10 mA		
	Leakage current	Maximum	I <sub>l</sub>	5μA		3μA		V = 30 mA		

Notes: 1. The thin short type is only available for 5V DC.

2. The ratio between the 4 operating modes (\*a to \*d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

4. The output transistor is open collector.

The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

## TIMING CHART

### 1. Built-in oscillation circuit type

Notes: 1. Circuit stability time : Max. 12 ms

2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

## 2. External triggering type

Note: The sensor recognizes at the  $V_{TH} \rightarrow V_{TL}$  edge of an external trigger that the external trigger has been input.

- Notes: 1. Circuit stability time: Max. 12 ms  
 2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

## HOW TO USE

### 1. Wiring diagram of connector

- Notes: 1. The output transistor has an open collector structure.
- Detection status: Output transistor ON (connected to GND)
  - Non-detection status: Output transistor OFF (open state)
2. The status of the external trigger input is as follows:
- Open at the high level
  - GND (less than 0.8V) at the low level
- Under no circumstances must a high-level voltage be applied.
3. To maintain the power supply superimposed noise performance, be certain to connect a capacitor (33µF or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

## REFERENCE DATA

### Operating region characteristics

- How to interpret the graph

Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

#### Operating area within the dotted lines

Objects that enter the entire area are detected.

Note: If only part of the object is in the detection area, it is not detected.

#### Operating area within the solid lines

Objects that even partially enter the area are detected.

## NOTES

### 1. Environment

- 1) Avoid using the sensor in environments containing excessive amounts of steam, dust, corrosive gas, or where organic solvents are present.
- 2) When the sensor is used in noisy environments, implement a countermeasure such as connecting a capacitor (Min. 33  $\mu$ F) across the power input terminals. Only use the sensor after verifying actual operation.

### 2. Wiring

- 1) Check all wiring before applying power. Incorrect wiring may damage the internal circuit (in particular, check that the connection to the power supply is not reversed.)
- 2) Avoid excessive removing and replacing of the connector.

### 3. Detector surface (Optical surface)

- 1) Keep the detector surface clean. Excessive dust or dirt on the detector surface will deteriorate the sensing performance.
- 2) Do not allow condensation or freezing to occur on the surface of the sensor. If condensation or freezing does occur at low temperatures, the sensor may not detect objects correctly.
- 3) This product is designed to detect the existence of human bodies. The sensor may not detect properly or the detection distance may become unstable if the objects consist of a low reflective material (e.g., an object coated with black rubber, etc.) or of a highly reflective material (e.g., mirror, glass, coated paper, etc.).

- 4) The front surface of the lens and case are made of polycarbonate resin and can withstand water, alcohol, oils, salts and weak acids. Other fluids such as alkalines, aromatic hydrocarbons and halogenated hydrocarbons may melt or swell the lens and case, please do not have such fluids touch the lens and case.
- 5) If you use the sensor with a cover or filter connected to the front of the sensor, the sensor may detect the cover itself, the detection distance can change, and unstable operation can result.
- 6) If this sensor is used in a position where it will be facing another sensor, light will be received from the other sensor which can cause mutual interference and malfunction. Therefore, please verify the installation conditions before use.

- 7) When multiple sensors are to be used side by side, please verify that there will be no mutual interference by installing them with the proper spacing, depending on the type as shown below.

Model number	Sensor spacing
AMBA1 series	5 cm 1.969 inch
AMA1 series	8 cm 3.150 inch
AMBA2 series	10 cm 3.937 inch
AMBA3 series	20 cm 7.874 inch

### 4. Recommended installation procedure

Install the sensor so that it is orientated correctly in relation to the pass directions of the target objects as shown in the figure below.

\* → stands for pass direction of the target object.

For the general precautions, refer to "NOTES FOR USING MOTION SENSOR (Common)" on next page.
