

# APD Series: Silicon PIN Diodes, Packaged and Bondable Chips

## Applications

- Switches
- Attenuators

## Features

- Established Skyworks PIN diode process
- Low capacitance designs to 0.05 pF
- Voltage ratings to 200 V
- Chip size < 15 mils square
- Tight control of I layer base width
- Mesa and planar chip designs

### NEW

Skyworks Green™ products are RoHS (Restriction of Hazardous Substances)-compliant, conform to the EIA/EICTA/JEITA Joint Industry Guide (JIG) Level A guidelines, are halogen free according to IEC-61249-2-21, and contain <1,000 ppm antimony trioxide in polymeric materials.

## Description

Skyworks APD series of silicon PIN diodes are designed for use as switch and attenuator devices in high-performance RF and microwave circuits. The PIN diode designs are useful over a wide range of frequencies from below 100 MHz to beyond 30 GHz. These devices use Skyworks well-established silicon technology resulting in PIN diodes with tightly controlled I-region characteristics.

Devices APD0505-000 through APD0810-000 are designed for fast speed through moderate speed switch applications. They have low resistance and capacitance at zero and reverse bias. The thick I-region APD2220-000 is designed for low-distortion attenuator applications.

The absolute maximum ratings of the APD diode series are provided in Table 1. Electrical specifications are specified in Table 2. Typical performance characteristics are provided in Figures 1 and 2. Table 3 identifies the die part numbers with their corresponding top contact diameters and die outline drawings. Table 4 identifies the hermetic part numbers together with their thermal resistance specifications and hermetic outline drawings.

**Table 1. APD Series Absolute Maximum Ratings**

Parameter	Symbol	Minimum	Typical	Maximum	Units
Power dissipation	P <sub>DIS</sub>			$\frac{\text{Maximum } T_J - \text{Case Temp}}{\text{Thermal Resistance}_{\text{junction-to-case}}}$	W
Reverse voltage	V <sub>R</sub>			See Voltage Rating column in Table 2	V
Forward current	I <sub>F</sub>			200	mA
Operating temperature	T <sub>OP</sub>	-65		+175	°C
Storage temperature	T <sub>STG</sub>	-65		+200	°C

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

**Table 2. APD Series Electrical Specifications (Note 1)**

<b>Attenuator Applications</b>							
APD2220-000	0.20	0.35	4.0	700	100	50	80

**Note 1:** Performance is guaranteed only under the conditions listed in this Table and is not guaranteed over the full operating or storage temperature ranges. Operation at elevated temperatures may reduce reliability of the device.

**Note 2:** Reverse current is specified at 10 μA maximum at the voltage rating noted. Do not exceed this voltage.
